### (54) STRUCTURAL ADHESIVE COMPOSITION

#### (57)Abstract:

PURPOSE: To provide the titled adhesive compsn. excellent in rust prevention, capable of electrodeposition coating, well suited for use in assembly of automobile bodies, etc., by mixing epoxy resins, heat-active hardeners, and metallic oxide-iron oxide sintered complex ferrite or  $\alpha$ -Fe<sub>2</sub>O<sub>3</sub> powder.

CONSTITUTION: 100pts.wt. epoxy resin (e.g., glycidyl ether-type epoxy resin), about 1W15pts.wt. heat-active hardener (e.g., dicyandiamide, 4,4'-diaminodiphenyl sulfone), and about 20W150pts.wt. metallic oxide-iron oxide sintered complex ferrite of formula MeO.Fe<sub>2</sub>O<sub>3</sub> (wherein Me is a divalent metal) (e.g., BaO.Fe<sub>2</sub>O<sub>3</sub>) or  $\alpha$ -Fe<sub>2</sub>O<sub>3</sub> powder are mixed to yield the intended structural adhesive compsn. Metallic oxide-iron oxide sintered complex is yielded by mixing metallic oxides (e.g., MnO, BaCO<sub>3</sub>) with iron oxide powder, sintering and then pulverizing.
